Mathematical techniques in data science

Lecture 7: Convolutional neural networks

Computer vision

A field that enables computers and systems to derive meaningful information from digital images, videos, and other visual inputs

▲ロ ▶ ▲周 ▶ ▲ 国 ▶ ▲ 国 ▶ ● の Q @

- Image classification/object recognition
- Object detection
- Image segmentation
- Image generation
- Image style transfer

Feed-forward neural networks

• Structure:

- Graphical representation
- Activation functions
- Issues (in computer vision applications)
 - Flat vectors lose spatial information
 - Sensitive to the location of the object
 - Cannot capture small regions within an image

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

- Cannot capture relative differences
- Redundant parameters

MNIST

メロト メポト メヨト メヨト

Convolutional neural networks

- pixel position and neighborhood have semantic meanings
- elements of interest can appear anywhere in the image

Convolutional layer

- Do not flatten the input image
- Apply a filter (kernel) to each local region of the image
- Slide the filter through all spatial locations to get the output

Applying a kernel

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 - のへぐ

Examples of kernels

▲□▶▲圖▶▲≣▶▲≣▶ ≣ のQ@

Feature extraction

- Historically, convolutional filters have been used to extract image features
- CNNs automate that process by considering the entries of the filters as model parameters
- This leads to a (somewhat technically) correct but misleading claim that "CNNs automatically design the features for image prediction"

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

Feature extraction

Filter W1 (3x3x3) Output Volume (3x3x2) w1[:,:,0] 0[:,:,0] 0 0 1 -6 -7 -5 1 0 -6 0 0 3 -5 -8 0 w1[:,:,1] 0[:,:,1] 1 0 0 2 3 -2 7 4 1 1 -1 1 5 5 7 -1 0 0 w1[:,:,2] -1 1 0 0 -1 1 1 0 -1 Bias b1 (1x1x1) b1[:,:,0]

0

Stride

- Number of pixels to shift the filter
- Can be different for each dimension

3 x 3 Output Volume

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

strides = (2, 2)

(Source: Adit Deshpande)

Padding

2 possible settings: Valid or Same

7 x 7 Input Volume

5 x 5 Output Volume

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

(Valid)

Padding

Same padding: add 0 pixels to the boundary of the input image to get a similar output shape

э

Convolutional neural networks

◆□ ▶ ◆□ ▶ ◆ 臣 ▶ ◆ 臣 ▶ ● 臣 ● のへで

- Down-sample the input image along its spatial dimensions
- Common types: max pooling and average pooling

Max pooling

- Return max value when applying the filter
- Default strides = filter size

Average pooling

- Return average value when applying the filter
- Default strides = filter size

- Dropout
- Fully connected
- Softmax

Convolutional layer on Keras

Conv2D class

```
tf.keras.layers.Conv2D(
    filters,
    kernel size,
    strides=(1, 1),
    padding="valid",
   data_format=None,
    dilation_rate=(1, 1),
   aroups=1,
    activation=None,
   use_bias=True,
    kernel initializer="glorot uniform",
    bias_initializer="zeros",
    kernel_regularizer=None,
    bias_regularizer=None,
    activity_regularizer=None,
    kernel constraint=None.
    bias_constraint=None,
   ∗∗kwargs
```

Pooling layer on Keras

MaxPooling2D class

```
tf.keras.layers.MaxPooling2D(
    pool_size=(2, 2), strides=None, padding="valid", data_format=None, ***kwargs
)
```

AveragePooling2D class

```
tf.keras.layers.AveragePooling2D(
    pool_size=(2, 2), strides=None, padding="valid", data_format=None, ***kwargs
)
```
